

金属化聚酯膜

Metallized PET (polyethylenetherephthalate) films

◆ 特点 Feature

金属化薄膜是在真空状态下，将铝或锌铝蒸镀到薄膜的表面。该材料介电常数大，绝缘电阻高，耐热性能好，抗拉伸性能好，适用于制作金属化聚酯薄膜电容器。

The AL or ZN-AL layer deposited by evaporation under vacuum, big dielectric constant and insulation resistance, and excellent shrinkage and tensile strength. Widely used in Metallized PET film capacitors.
